

Section A (DIPLOMA SCHEME)

(Diploma holders need to study 4 subjects in Section A)

Compulsory Subjects

AD 301 Fundamentals of Design and Manufacturing

AD 302 Material Science and Engineering

AD 303 Computing and Informatics

AD 304 Society and Environment

Arise! Awake! And stop not until the goal is reached.

: [Swami Vivekananda](#)

Fundamentals of Design and Manufacturing [AD 301]

Group A

Engineering design process and its structure, Identification and analysis of need, product design specifications, standards of performance and constraints,

Searching for design concepts; morphological analysis, brainstorming. Evaluation of design concepts for physical reliability, economic feasibility and utility

Detailed design; design for manufacture, assembly, shipping, maintenance, use, and recyclability. Design checks for clarity, simplicity, modularity and safety.

Standardization and size ranges. Reliability and robust design, Design organisation and communication, technical reports, drawings, presentations and models

Concept of manufacturing; classification of manufacturing processes, Fundamentals of casting, Basic understanding of commonly used casting processes (sand casting, investment casting and permanent mould casting processes),

Fundamentals of metal forming; hot and cold working; basic understanding of primary metal forming processes (rolling, forging, extrusion and drawing processes, punching and blanking)

Group B

Fundamentals of metal cutting; tool-work interaction for production of machined surfaces, Classification of machining processes, Basic machining operations (turning, shaping, planing, drilling and milling processes)

Fundamentals of grinding and finishing; overview of unconventional machining processes; fundamentals of welding processes; introduction to primary welding and allied processes; selection of manufacturing processes.

Design for manufacturability. Need for integration-commercial, economic and technological perspective; basic tools of integration; concept of a system.

Introduction to information technology and its elements, Introduction to group technology; introduction to simulation and database management systems, Elements of integration:-controllers, sensors, robots, automated machines; AGVs, AS, RS, etc.

Product and process design- for integration; design for economic manufacturing; design for manufacturing integration. Introduction to computer aided process planning; selection of machine tools

Material Science and Engineering [AD 302]

Group A

Introduction to materials, Metal and alloys, ceramics, polymers and semi conducting materials-introduction and application as engineering material, Defects in solids.

Point, line and surface defects, Diffusion in solids, Phase diagrams. Mono-component and binary systems, non-equilibrium system, phase diagram and. application in crystalline and non-crystalline solids.

Mechanical properties, Tensile strength, yield strength, elastic and viscoelastic properties, creep, stress relaxation and impact. Fracture behaviour. Ductile fracture, Griffith theory, effect of heat treatment and temperature on properties of metals

Deformation of metals, Elastic and plastic deformation, slip, twin, dislocation theory, critical resolved shear stress, deformation in polycrystalline materials

Season cracking, Baschinger's effect, strengthening mechanics; work hardening recovery, crystallization and grain growth, cold and hot working

Group B

Heat treatment, Iron-carbon system, Annealing, normalising, hardening, critical cooling rate, hardenability, age hardening, surface hardening, tempering. Thermal properties, High temperature materials; materials for cryogenic application, thermally insulating materials

(Specific heat, thermal conductivity, thermal expansion) Ceramic materials and polymers, Silicon structures, polymerism in glass, electrical properties of ceramic phases, rocks, building stones, refractories

Polymerisation mechanism, structural properties of polymer, thermoplastics, thermosets, elastomer, resins, composites, particles and fibre reinforced composite. Composite material, including nano material

Electronic properties, Magnetism, diamagnetism, paramagnetism, ferromagnetism, magnetic energy, zone theory of solids, zones in conductors and insulators

COMPUTING AND INFORMATICS [AD 303]

Group A

Programming languages. C including C++; Languages-declaration, Expressions, Control statements, arrays, function, pointers and structures; Algorithms and flow-charts. Introductory to Pascal.

Informatics : Information systems for decision making; Data management and Database management technology; Office automation system – LAN, WAN, electronic mail, electronic data Interchange; client server technology; overview of TCP/IP; Information systems for business, strategic information systems; Information resources management.

Group B

Computer basics. History, generation and classification of computers. Number systems. Boolean algebra.

Hardware. Introduction to logic gates and flip flops. Components of a computer. Input/output devices. CPU unit and memory unit. Secondary storage.

Softwares. System software; application software; compilers and translators.

Operating systems. Introduction to operating systems; types of operating systems and their function; popular operating systems – MS-DOS, UNIX and Windows; file management

Society and Environment [AD 304]

Group A

Society

Societal Structures and Dynamics

An analysis of basic sociological concepts and their applications to contemporary society;

Social stratification. Caste, class, cultural heritage, occupation, mobility and income distribution. Social tensions and their causes, societal responsibilities and social institutions.

Development Process

Parameters for development. Interrelationship between social, economic and scientific factors. Role of science and technology in development. Planning-Its objectives and assessment.

Technology Assessment

Historical development of science and technology. Criteria for assessment of appropriate technology and technology adaptation.

Group B

Environment

Ecosystems

Natural ecosystems. Principles of ecobalance. Biosphere cycle, carbon dioxide cycle. Causes for eco-imbalance, its effects and remedies.

Environmental Degradation

Causes for degradation-its effects. Control of air, Water, soil and noise pollutions. Protection of ozone layer.

Waste Management

Agricultural, Urban and industrial wastes.

Sustainable Development

Definition and concept. Technology for sustainable energy and materials.
